Marilyn,

I'm traveling this week so I don't have access the closure report. I'm not sure how this impacts the deed requirements since even if there are areas on the site that exceed the clean-up levels, there are places that do not, i.e. meet the clean-up levels. I am scheduled to be out of town until Saturday morning.

Jean,

I was looking for the actual clean-up values. I suspect they exceed the requirements for the RO's for the site (meaning the site is cleaner than the RO's). As I am sure you are aware the screen levels for PCP and other constituents have changed since the time the site was remediated. This does not change the protectiveness of the remedy or require additional remediation. It is a factor in determining the deed restriction requirements. I am looking through our electronic filing system trying to locate that information. If you have the data that shows the high values for contaminants left on site for both surface and subsurface soils that would be very helpful. I am sorry to bother you with this. As I am sure you are aware when we moved to this building many of our paper files were scanned and stored electronically. Those documents are difficult to find. I am trying to get comments back to Shawn today. So, it has put me in a very tight schedule.

Marilyn,

I don't have an electronic copy of the RA Completion Report; however, to answer your question, the clean up goals were as you've listed below and the goals were met, i.e. verification samples confirmed that the soils left onsite did not exceed these goals.

Jean,

Do you have a convenient copy of the Remedial Action Completion Report? I am looking for the values that were left in soils. I have the remedial action goals which were clean up to 300 mg/kg for pcp, 20 ug/kg dioxin, and 6.0 mg/kg PAH's. Did clean up exceed these goals?
